COMEX: Flight Information for AJAX Airborne In Situ CO₂ and CH₄, 2014-2015, USA

Get Data

Documentation Revision Date: 2024-06-14

Dataset Version: 1

Summary

This dataset provides information to access NASA Earthdata published flight data and flight information collected by the Alpha Jet Atmospheric eXperiment (AJAX) and associated with the COMEX project in 2014-2015. The file lists information for COMEX-related datasets that has been subsetted from AJAX collections archived through NASA's Atmospheric Science Data Center. AJAX data are not otherwise replicated in this dataset. AJAX is a partnership between NASA's Ames Research Center and H211, L.L.C., which conducted in-situ measurements over California, Nevada, and the coastal Pacific in support of satellite validation. During COMEX data collection, a Picarro greenhouse gas (GHG) sensor was mounted on an Alpha Jet, a tactical strike fighter developed by Dassault-Breguet and Dornier through a German-French NATO collaboration. The GHG sensor made repeat measurements in California and Nevada. In situ data included measurements of CO₂, CH₄, and H₂O at 2 Hz or CH₄ and H₂O at 10 Hz with a strategy of characterizing atmospheric structure over ocean and land, and vertical profiles to at least 5000 m. Ancillary data, including O₃, formaldehyde, and meteorological profiles, were also collected. This dataset provides filenames, spatiotemporal bounds, and download URLs for accessing these in situ data. This information is provided in comma separated values (CSV) format.

This dataset holds one file in comma separated values (CSV) format. The file lists information for COMEX-related datasets that has been subsetted from AJAX collections archived through NASA's Atmospheric Science Data Center (<https://asdc.larc.nasa.gov/project/AJAX>).

1. Dataset Overview

This dataset provides information to access NASA Earthdata published flight data and flight information collected by the Alpha Jet Atmospheric eXperiment (AJAX) and associated with the COMEX project in 2014-2015. The file lists information for COMEX-related datasets that has been subsetted from AJAX collections archived through NASA's Atmospheric Science Data Center. AJAX data are not otherwise replicated in this dataset. AJAX is a partnership between NASA's Ames Research Center and H211, L.L.C., which conducted in-situ measurements over California, Nevada, and the coastal Pacific in support of satellite validation. During COMEX data collection, a Picarro greenhouse gas (GHG) sensor was mounted on an Alpha Jet, a tactical strike fighter developed by Dassault-Breguet and Dornier through a German-French NATO collaboration. The GHG sensor made repeat measurements in California and Nevada. In situ data included measurements of CO₂, CH₄, and H₂O at 2 Hz or CH₄ and H₂O at 10 Hz with a strategy of characterizing atmospheric structure over ocean and land, and vertical profiles to at least 5000 m. Ancillary data, including O₃, formaldehyde, and meteorological profiles, were also collected. This dataset provides filenames, spatiotemporal bounds, and download URLs for accessing these in situ data. This information is provided in comma separated values (CSV) format.

This dataset holds information for COMEX-related datasets that has been subsetted from AJAX collections archived at NASA's Atmospheric Science Data Center (<https://asdc.larc.nasa.gov>) (Iraci 2021a, 2021b, 2021c).

Project: COMEX (CO₂ and MEthane eXperiment)

The CO₂ and MEthane eXperiment (COMEX) campaign, funded bilaterally by NASA and ESA, supported the mission definition of CarbonSat and HypSPRI by providing representative airborne remote sensing data as well as ground-based and airborne in situ data. The objectives were addressed by a unique combination of VIS/NIR/SWIR hyperspectral remote sensing airborne instrumentation (AVIRIS-C, AVIRIS-NG), TIR hyperspectral remote sensing airborne instrumentation (Mako), NIR/SWIR spectroscopic remote sensing airborne instrumentation (MAMAP) as well as in situ airborne (Picarro GHG sensor/analyzer and CIRPAS atmospheric measurements suite) and ground based (AMOG - AutoMOBILE greenhouse Gas surveyor) measurements for validation and interpretation support. COMEX demonstrated that methane emissions associated with fossil fuel production activities in the Los Angeles area were of sufficient magnitude and size for space-based observations. COMEX was executed between May and September 2014 around the Southern California, USA, area.

Acknowledgement

The COMEX project received funding support from NASA (grants NNX13AM07G, NNX13AM21G) and from the European Space Agency.

2. Data Characteristics

Spatial Coverage: Portions of southern California, U.S.

Spatial Resolution: Flight lines of varying lengths

Temporal Coverage: 2014-05-19 to 2015-08-19

Temporal Resolution: One-time estimates

Study Area: Latitude and longitude are given in decimal degrees.

Site	Northernmost Latitude	Southernmost Latitude	Easternmost Longitude	Westernmost Longitude
California	38.894	34.130	-116.259	-122.057

Data File Information

This dataset holds one file in comma separated values (.csv) format: **comex_ajax_download_table.csv**

This CSV lists data files that are in ICARTT format, which is described in the [ICARTT File Format Standards V1.1](#).

The file naming convention for these ICARTT files is *AJAX-<metric>_ALPHA_<date>_<version>_F<flight>.ict*, where

- *<metric>* - indicates primary type of measurements: "CO₂CH₄" (carbon dioxide and methane), "MMS" (meteorological profiles), "O₃" (ozone)
- *<date>* - date of flight in YYYYMMDD format
- *<version>* - revision number: "R0" or "R1"
- *<flight>* - three digit flight number for AJAX project

Table 1. Variables in *comex_ajax_download_table.csv*.

Variable	Description
filename	Name of ICARTT data file.
flight_number	three digit flight number for AJAX project
category	type of data file: "mission data" or "related data"
start_time	starting time of data collection in UTC time (YYYY-MM-DD hh:mm)
end_time	ending time of data collection in UTC time (YYYY-MM-DD hh:mm)
max_lat	maximum latitude for data in decimal degrees
min_lat	minimum latitude for data in decimal degrees
max_lon	maximum longitude for data in decimal degrees
min_lon	minimum longitude for data in decimal degrees
file_type	"table"
file_format	"text/icartt"

download	URL for downloading the data file
file_size_mb	file size in megabytes

User Note:

- An active [Earthdata login](https://urs.earthdata.nasa.gov/) is required for accessing files using the provided URLs. Earthdata accounts are available free of charge at <https://urs.earthdata.nasa.gov/>.
- Users should cite both this dataset and the corresponding [AJAX collections](#) (Iraci 2021a, 2021b, and 2021c) archived at NASA's Atmospheric Science Data Center when accessing and using the underlying data in publications, in accordance with the [EOSDIS Data Use Policy](#). See our [Data Use and Citation Policy](#) for more information.

3. Application and Derivation

These resources assist researchers in accessing AJAX data associated with the COMEX project.

During COMEX, an Alpha Jet from NASA's Ames Research Center carried a Picarro GHG sensor that was tasked for repeat GHG measurements in California and Nevada. In situ data that were collected including measurements of CO₂, CH₄, and H₂O at 2 Hz or CH₄ and H₂O at 10 Hz with a strategy of characterizing the larger atmospheric structure over ocean and land, and vertical profiles to at least 5000 m.

Further information about the COMEX project is available from Krautwurst, et al. (2016) and ESA (2024).

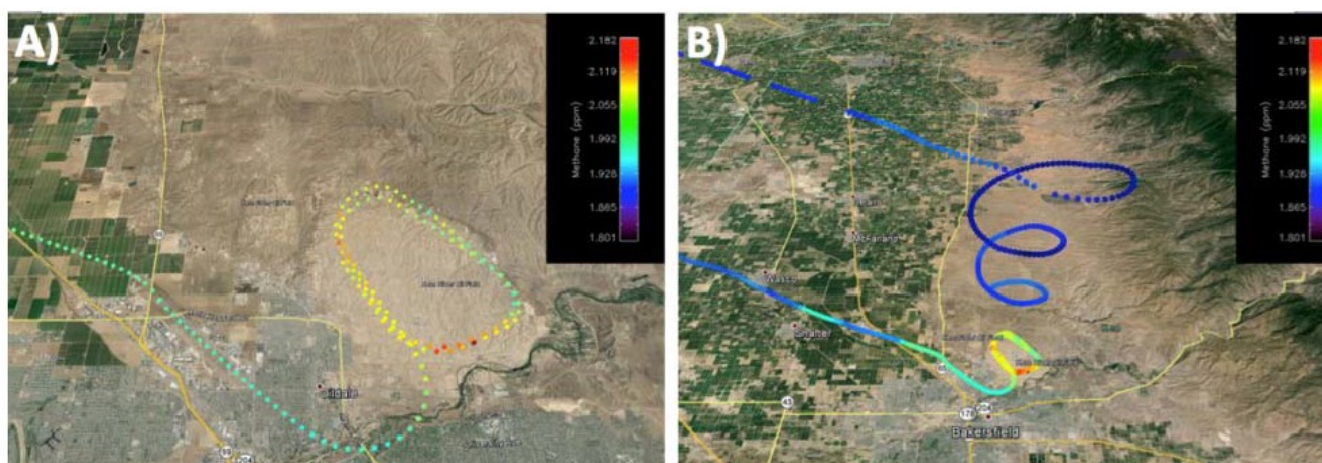

Figure 2. Methane concentrations from the Alpha Jet over Kern River oil field and environs in California on 10 June 2014. (A) Depiction of two-dimensional change in CH₄ at low altitudes. (B) Three-dimensional depiction of CH₄ concentrations from high to low altitudes. Source: Krautwurst et al. (2016).

4. Quality Assessment

Descriptive information can be found in Iraci (2021a, 2021b, 2021c) for each relevant chemical species collected.

5. Data Acquisition, Materials, and Methods

<p>During COMEX data collection, a Picarro greenhouse gas (GHG) sensor was mounted on an Alpha Jet (Hamill et al., 2016) and was tasked for repeat GHG measurements in California and Nevada. These in situ data include measurements of CO₂, CH₄, and H₂O at 2 Hz or CH₄ and H₂O at 10 Hz with a strategy of characterizing atmospheric structure over ocean and land, and vertical profiles to at least 5000 m.</p>	
--	--

These Picarro in situ data have been used in estimating the emission rates of ground locations and to scale background atmospheric profiles for the radiative transfer model SCIATRAN used for the Methane Airborne MAPper (MAMAP) retrieval.

This dataset holds information for COMEX-related datasets that have been subsetted from the AJAX collections archived at NASA's Atmospheric Science Data Center (<https://asdc.larc.nasa.gov/>) (Iraci 2021a, 2021b, 2021c).

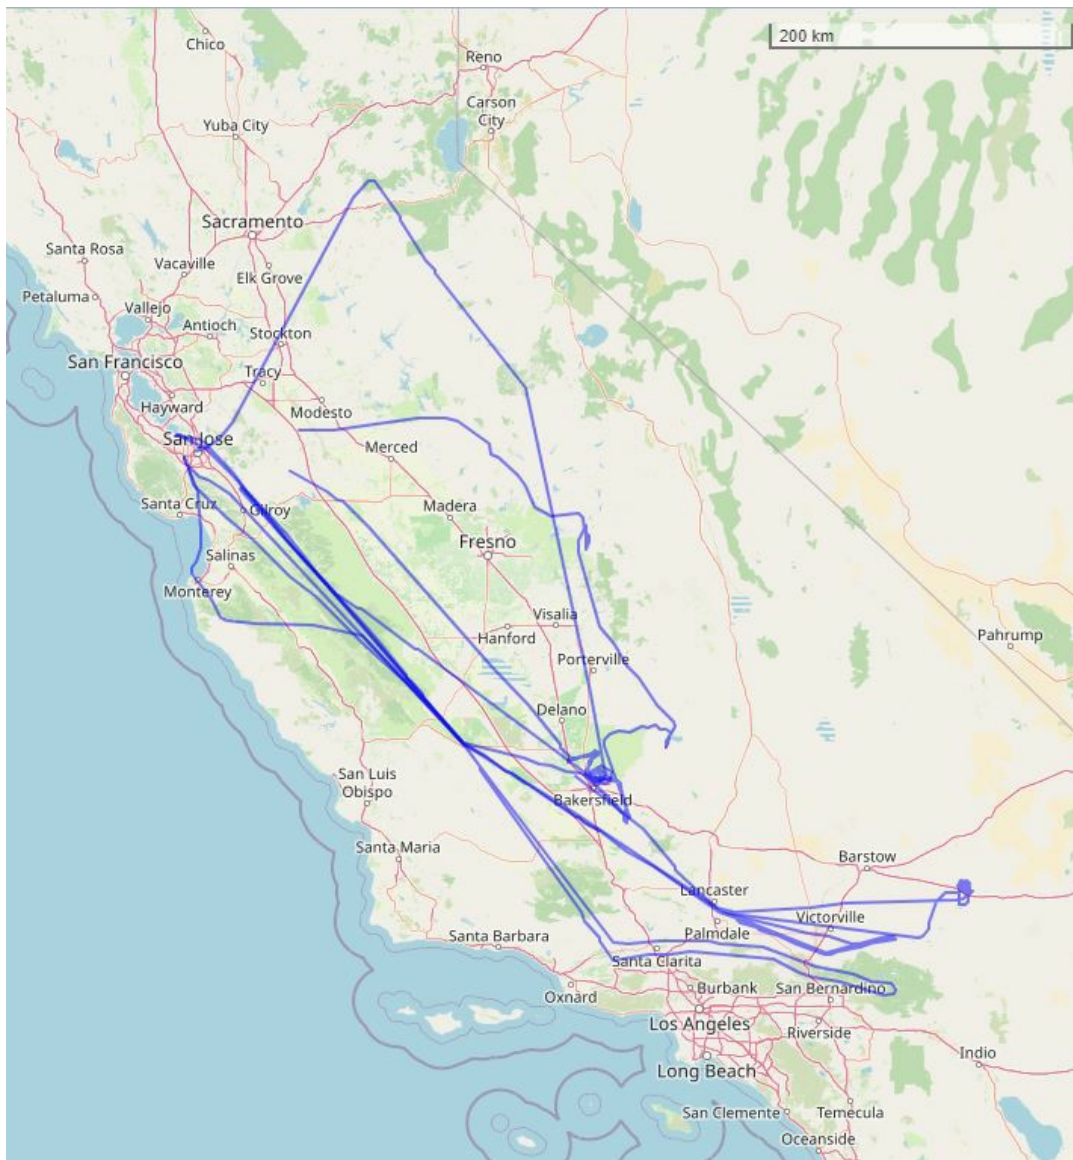

Figure 3. Flight paths of six AJAX flights related to the COMEX project shown as blue lines over southern California, U.S. Flights originated from NASA's Ames Research Center at Moffet Field, near San Jose, California. Basemap: © [OpenStreetMap](#) contributors.

6. Data Access

These data are available through the Oak Ridge National Laboratory (ORNL) Distributed Active Archive Center (DAAC).
