NACP Regional: Gridded 1-deg Observation Data and Biosphere and Inverse Model Outputs

Get Data

Revision Date: May 2, 2013

Summary:

This data set contains standardized gridded observation data, terrestrial biosphere model output data, and inverse model simulations of carbon flux parameters that were used in the North American Carbon Program (NACP) Regional Synthesis activities. The data set provides five observation data files (MODIS GPP, MODIS NPP, FIA forest biomass/forest area, NASS crop NPP, and NASS agricultural land fraction) and simulation results from 18 terrestrial biosphere models (TBM) (28 variables; 114 files) and seven inverse models (IM) (two variables; 8 files).

To produce this data set, the NACP Modeling and Synthesis Thematic Data Center (MAST-DC) resampled original model simulation results and observation measurement data to 1-degree spatial resolution for North American region, interpolated into monthly or yearly temporal resolution, and reformatted into Climate and Forecast (CF) convention compatible netCDF format.

This data set is related to two other processed regional data sets (i.e., NACP Regional: Supplemental Gridded Observations, Biosphere and Inverse Model Outputs; and NACP Regional: National Greenhouse Gas Inventories and Aggregated Gridded Model Data) and the originally-submitted NACP Regional: Original Observation Data and Biosphere and Inverse Model Outputs.

Detailed descriptions of observation data, TBMs, and IMs can be found in the companion file [Regional-Description_of_Observations_and_Models.pdf](#).

MAST-DC was a component of the NACP (www.nacarbon.org) designed to support NACP by providing data products and data management services needed for modeling and synthesis activities. The overall objective of MAST-DC was to provide data management support to NACP investigators and agencies performing modeling and synthesis activities.

1. Data Set Overview:

Project: North American Carbon Program (NACP)

The NACP (Denning et al., 2005; Wofsy and Harriss, 2002) is a multidisciplinary research program to obtain scientific understanding of North America's carbon sources and sinks and of changes in carbon stocks needed to meet societal concerns and to provide tools for decision makers. Successful execution of the NACP has required an unprecedented level of coordination among observational, experimental, and modeling efforts regarding terrestrial, oceanic, atmospheric, and human components. The program has relied upon a rich and diverse array of existing observational networks, monitoring sites, and experimental field studies in North America and its adjacent oceans. It is supported by a number of different federal agencies through a variety of intramural and extramural funding mechanisms and award instruments.

NACP and MAST-DC organized several synthesis activities to evaluate and inter-compare biosphere model outputs and observation data at local to continental scales for the time period of 2000 through 2005. The synthesis activities have included three component studies, each conducted on different spatial scales and producing numerous data products: (1) site-level analyses that examined process-based model estimates and observations at over 30 AmeriFlux and Fluxnet-Canada tower sites across North America; (2) a regional, mid-continent intensive study centered in the agricultural regions of the United States and focused on comparing inventory-based estimates of net carbon exchange with those from atmospheric inversions; and (3) a regional and continental synthesis evaluating model estimates against each other and available inventory-based estimates across North America. A number of other NACP syntheses were conducted, including ones focusing on non-CO₂ greenhouse gases, the impact of disturbance on carbon exchange, and coastal carbon dynamics. The Oak Ridge National Laboratory (ORNL) Distributed Active Archive Center (DAAC) is the archive for the NACP synthesis data products.

This data set contains part of the third NACP synthesis product described above: regional analyses. It provides standardized 1-degree gridded observation (OM) data, terrestrial biosphere model (TBM) output data, and inverse model (IM) simulations that were processed by MAST-DC and used in the NACP Regional Synthesis activities (Table 1). The data set includes five (5) OM data files (MODIS GPP, MODIS NPP, FIA forest biomass/forest area, NASS crop NPP, and NASS agricultural land fraction), 114 TBM data files, and eight (8) IM data files. To produce this data set, the originally-submitted data were resampled to 1-degree spatial resolution for North American region, interpolated into monthly or yearly temporal resolution, and reformatted into Climate and Forecast (CF) convention compatible netCDF format (Table 2).

This data set is related to two other processed regional data sets (i.e., supplemental observation data and biosphere and inverse model outputs; and national greenhouse gas (GHG) inventories and model outputs aggregated by GHG inventory zones) and the originally-submitted observation data and model outputs (see Related Data Products above). Detailed descriptions of observation data, TBM, and IM models can be found in a separate document: [Regional-Description_of_Observations_and_Models.pdf](#).

Table 3. Data Packages Summary

Data Set	Sub Category	Variables	Files	File Formats
Standardized Gridded Observation and Model Output Data	Observation Measurements (OM)	6 (GPP, NPP, forest biomass, forest area, crop NPP, agricultural land fraction)	5	netCDF
	Terrestrial Biosphere Model (TBM) Outputs	28	114	netCDF
	Inverse Model (IM) Outputs	2 (NEE, FF)	8	netCDF

2. Data Description:

This data set contains a total of 127 data files (5 OM data files, 114 TBM output data files, and 8 IM output data files). The data have been resampled by ORNL DAAC to a standard 1-degree spatial resolution for North American region, interpolated into monthly or yearly temporal resolution, converted to a standard measurement unit (generally, kg C/m²/month or year), and reformatted into CF convention compatible netCDF format.

Site boundaries: (All latitude and longitude given in decimal degrees)

Site (Region)	Westernmost Longitude	Easternmost Longitude	Northernmost Latitude	Southernmost Latitude
North America	-170	-50	84	10

2.1. Spatial Coverage

Site: North America

2.2. Spatial Resolution

1 degree x 1 degree

2.3. Spatial Coordinate Reference System

Sphere-based Geographic Lat/Lon. In CF-compatible netCDF files, it's defined as:

```
char crs;
  crs:grid_mapping_name = "latitude_longitude";
  crs:semi_major_axis = 6370997.0f;
  crs:inverse_flattening = 0.0f;
```

2.4. Temporal Coverage

Varies (range: 1990-2007). See Tables 2-4.

2.5. Temporal Resolution

Monthly or yearly with a few "one time" observations. See Tables 4-6.

2.6. Time Variable:

Units: "days since 1990-01-01 UTC"

Calendar: "noleap"

2.7. Data File Information

All of the data files are Climate & Forecast (CF) convention 1.0 compatible netCDF v3 formatted. Spatial resolution for all files is 1 degree x 1 degree. Spatial extent and temporal resolution and extent vary as noted. Missing values are designated by the value -9999.0. For each .zip file there is also an accompanying .txt companion file which contains file characteristics and processing steps to convert the files into different formats.

2.8. Observation Data and Model Output Variables

Table 7. List of Observation Data and Model Output Variables

Short Name	Units	Long Name	Temporal Resolution	Models
Gross Primary Productivity (GPP)				
GPP	kg C m^-2 month^-1	gross primary production	monthly	MODIS GPP, BEPS, Can-IBIS, CASA-GFEDv2, CLM-CASA, CLM-CN, DLEM, EC-LUE, EC-MOD, LPJmL, MOD17-plus, ORCHIDEE (v1.0), TEM6, VEGAS, OSU-BGC
Net Primary Productivity (NPP)				
NPP	kg C m^-2 month^-1	net primary production	monthly	MODIS NPP, BEPS, Can-IBIS, CLM-CASA, CLM-CN, ISAM, LPJmL, MC1, NASA-CASA, ORCHIDEE (v1.0), TEM6, VEGAS, DLEM
NPPCrop	kg C m^-2 month^-1	net primary production crop	monthly	ORCHIDEE (v2.1)
CropNPP	MgC y^-1	crop NPP	annual	NASS CropNPP
Net Ecosystem Exchange (NEE)				
NEE	kg C m^-2 month^-1	net ecosystem exchange	monthly	BEPS, Can-IBIS, CASA-GFEDv2, CLM-CASA, CLM-CN, EC-MOD, ISAM, LPJmL, MC1, MOD17-plus, NASA-CASA, SIB3, TEM6, VEGAS, CASA-Transcom, DLEM, CarbonTracker, UToronto, LSCE-no1, LSCE-no2, JENA, CSU-no1, Michigan-Geostatistical
CO2FLUX	kg C m^-2 month^-1	co2 flux	monthly	ORCHIDEE (v1.0)
ANEE	kg C m^-2 year^-1	annual net ecosystem exchange	yearly	LPJmL
NEEF	kg C m^-2 month^-1	net ecosystem exchange with fire emissions	monthly	MC1, CASA-GFEDv2
ANEEF	kg C m^-2 year^-1	annual net ecosystem exchange with fire emissions	yearly	LPJmL
Net Ecosystem Production				

NEP	kg C m-2 month-1	net ecosystem production	monthly	BEPS, Can-IBIS, CLM-CASA, CLM-CM, NASA-CASA, VEGAS
Total Respiration				
R	kg C m-2 month-1	respiration	monthly	CASA-GFEDv2
Reco	kg C m-2 month-1	ecosystem respiration	monthly	MOD17-plus
Autotrophic Respiration				
Ra	kg C m-2 month-1	autotrophic respiration	monthly	Can-IBIS, VEGAS, DLEM
RA	kg C m-2 month-1	autotrophic respiration	monthly	LPJmL
Heterotrophic Respiration				
Rh	kg C m-2 month-1	heterotrophic respiration	monthly	BEPS, Can-IBIS, ISAM, NASA-CASA, VEGAS, DLEM
HR	kg C m-2 month-1	heterotrophic respiration	monthly	CLM-CASA, CLM-CN
RH	kg C m-2 month-1	heterotrophic respiration	monthly	LPJmL, TEM6
RespH	kg C m-2 month-1	heterotrophic respiration	monthly	MC1
HetResp	kg C m-2 month-1	heterotrophic respiration	monthly	ORCHIDEE (v1.0)
Fire Emissions				
Cfire	kg C m-2 month-1	fire emissions	monthly	CASA-GFEDv2
cfire	kg C m-2 month-1	fire emissions	monthly	VEGAS
FIRE	kg C m-2 year-1	fire emissions	yearly	LPJmL
BioCons	kg C m-2 month-1	biomass consumed	monthly	MC1
FireEmissions	kg C m-2 month-1	fire emissions	monthly	TEM6
Total Living Biomass				
TotLivBiom	kg C m-2	monthly mean total carbon content of the living biomass including heartwood	monthly	DLEM
TotLivBiom	kg C m-2	total living biomass	monthly	MC1
CBiomass	kg C m-2	biomass	yearly	Can-IBIS
cb	kg C m-2	total biomass carbon	monthly	VEGAS
Biomass	kg C m-2	forest biomass	one time	FIA Forest Biomass
Total Soil Carbon: Total soil and litter carbon content vertically integrated over the entire soil column				
TotSoilCarb	kg C m-2	monthly mean total soil carbon density	monthly	DLEM
CSoil	kg C m-2	soil carbon	yearly	Can-IBIS
SOILC	kg C m-2	total soil organic matter C	monthly	CLM-CASA, CLM-CN
SOILC	kg C m-2	total soil carbon	monthly	TEM6
SOILC	kg C m-2	soil carbon	yearly	LPJmL
TSLC	kg C m-2	total soil carbon	monthly	MC1
csoil	kg C m-2	soil carbon	monthly	VEGAS
Leaf Area Index				
LAI	(-)	leaf area index	monthly	ORCHIDEE (v1.0), VEGAS
TLAI	(-)	total projected leaf area index	monthly	CLM-CASA, CLM-CN

Evapevapotranspiration (ET)				
evap	W m-2	evapotranspiration		VEGAS
Coarse Woody Debris Carbon				
CWDC	kg C m-2	coarse woody debris C	monthly	CLM-CASA, CLM-CN
Wood Carbon				
WOODC	kg C m-2	wood C	monthly	CLM-CASA, CLM-CN
Fine Root Carbon				
FROOTC	kg C m-2	fine root C	monthly	CLM-CASA, CLM-CN
Land Fraction				
landfrac	(-)	land fraction	monthly	CLM-CASA, CLM-CN
Leaf Carbon				
LEAFC	kg C m-2	leaf C	monthly	CLM-CASA, CLM-CN
cleaf	kg C m-2	leaf carbon	monthly	VEGAS
Litter Carbon				
LITTERC	kg C m-2	litter C	monthly	CLM-CASA, CLM-CN
LITC	kg C m-2	litter carbon	yearly	LPJmL
Vegetation Carbon				
VegC	kg C m-2	vegetation C	monthly	CLM-CASA
cvege	kg C m-2	total vegetation carbon	monthly	VEGAS
VEGC	kg C m-2	live vegetation carbon	yearly	LPJmL
VEGC	kg C m-2	total vegetation above and below ground	monthly	TEM6
TOTVEGC	kg C m-2	total vegetation carbon	monthly	CLM-CN
Net Biome Production				
NBP	kg C m-2 month-1	net biome production	monthly	MC1
Growth Respiration				
GROWTH_RESP	kg C m-2 month-1	growth respiration	monthly	ORCHIDEE (v1.0)
Net Carbon Exchange				
NCE	kg C m-2 month-1	net exchange of C from the land to the atmosphere	monthly	TEM6
Net Ecosystem Carbon Balance				
NECB	kg C m-2 month-1	net ecosystem C balance from the land to the atmosphere	monthly	TEM6

2.9. Companion File Information

Table 8. Companion Files

FILE NAME	DESCRIPTION
Regional-Description_of_Observations_and_Models.pdf	Overview of observation measurement data and terrestrial biosphere and inverse models, including descriptions, sources, contacts, and a comprehensive reference list
NACP_Model_Characteristics.pdf	Overview of process descriptions in participating TBMs and boundary conditions and driver data used in participating TBMs with a comprehensive reference list
NACP_Model_Metadata_Survey_Results.pdf	Metadata for TBMs Intercomparison: Site Model Data Comparison and Regional Model Data Comparison: Survey Results

3. Data Application and Derivation:

This data product contributes to a multidisciplinary research program to obtain scientific understanding of North America's carbon sources and sinks and of changes in carbon stocks needed to meet societal concerns and to provide tools for decision makers. It is part of a NACP regional and continental

synthesis to evaluate and inter-compare models and observation measurements across North America. This work provides a valuable assessment of the current status of terrestrial carbon modeling in North America by bringing together model estimates that incorporate a wide range of modeling choices and input data. This work can also be used to compare the model results to different observational data products.

4. Quality Assessment:

This data set provides the standardized, gridded observation measurements and model simulation output results that MAST-DC produced from the original data submissions. The differences (range) in estimates of regional land-atmosphere carbon fluxes in the data files in this data set appear to be driven by a combination of factors.

The participating models differ from each other because they are based on different simplifying assumptions and use different approaches (forward vs. inverse) and modeling strategies (detailed process, statistical, or observation based). They also differ structurally in how they represent the processes controlling carbon exchange between the land and atmosphere (e.g., representation of photosynthesis), in their input or environmental driver data (e.g., land cover, climate variables) and the temporal variability of those data, in their initial conditions, and in the parameter values used within their varying process descriptions. The gridded observation data also differ with regards to biome type, acquisition methods, spatial coverage and resolution, and temporal coverage and resolution. These varying approaches result in a large degree of variability in estimates of regional land-atmosphere carbon fluxes.

The variability in carbon flux estimates highlights the need for further analysis through the use of model runs following a common simulation protocol, to isolate the influences of model formulation, structure, and assumptions on flux estimates. A more formal model-data comparison is required to more definitively quantify the impact of model formulation and supporting and driver data on the accuracy of the simulation model outputs. Such efforts are underway by NACP, requiring substantial technical support for model participation, development of consistent and optimal environmental driver data sets, a unified intercomparison protocol, as well as coordination of the intercomparison effort across research groups. These NACP projects include (1) working to understand how model formulation and model choices impact overall model performance through the use of detailed simulation protocol and controlled input environmental driver data (e.g., Schwalm et al., 2010) and (2) the Multi-Scale Synthesis and Terrestrial Model Intercomparison Project (MsTMIP), which directly builds off the NACP regional synthesis products presented here.

5. Data Acquisition Materials and Methods:

Original model simulation results and observation measurement data were resampled by ORNL DAAC to a standard 1-degree spatial resolution for North American region, interpolated into monthly or yearly temporal resolution, converted to a standard measurement unit (generally, kg C/m²/month or year), and reformatted into CF convention compatible netCDF format. [Note: FIA forest biomass/area data are also provided at half degree resolution.]

Information about the specific data processing steps taken by MAST-DC are available by contacting the Data Center as indicated below.

6. Data Access:

This data set is available through the Oak Ridge National Laboratory (ORNL) Distributed Active Archive Center (DAAC).
