Information Division

1989

INTRODUCTION

Global digital data bases on the distribution and environmental characteristics of natural wetlands, compiled by Matthews and Fung (1987), have been archived on tape. These data bases were developed to evaluate the role of wetlands in the annual emission of methane from terrestrial sources. Five global 1^0 latitude by 1^0 longitude arrays are included on the tape. They are: (1) wetland data source, (2) wetland type, (3) fractional inundation, (4) vegetation type and (5) soil type. The first three data bases on wetland locations were published by Matthews and Fung (1987). The last two arrays contain ancillary information about these wetland locations: vegetation type from the data of Matthews (1983) and soil type from the data of Zobler (1986). This short paper is designed only to document the tape, and briefly explain the data sets and their initial application to estimating the annual emission of methane from natural wetlands. For complete discussions of the data, including sources and uncertainties, consult original publications listed in the references.

Globally, wetlands occur in a total of 3233 1^0 cells and occupy about $5.3 \times 10^{12} m^2$ (Matthews and Fung 1987). Each of the five data bases here includes information for the 3233 wetland locations; cells of other (non–wet) land and water are masked with unique values.

The outline below gives information about array characteristics such as dimensions, read formats, record lengths, blocksizes and value ranges. Sections 1–5 following the outline contain descriptions and translation tables of the individual data bases. The final section includes information on the first calculation of global methane emission from natural wetlands done by Matthews and Fung (1987) using these data sets in conjunction with field measurements of methane fluxes from various ecosystems and simple latitudinal estimates about the seasonality of methane production.

ISOL	(360,180)	Integer*4	do 10 j=1,180 read(20,'(250I4,110I4)') *(ISOL(i,j), i=1,360) 10 continue	wetland: 1–107 other land: 0 water: –1 see Section 5, Table 5

The tape: 9 track, 1600 bpi, ASCII, BLP, RECFM=F

The arrays: record length = 1440, blocksize = 1440.
(i,j) arrays are (360,180), 1^0 (lon,lat) resolution
j = 1,180: j = 1: 1^0 band from 90^0S to 89^0S ...
j = 180: 1^0 band from 89^0N to 90^0N
i = 1,360: i = 1: 1^0 band from 180^0 (dateline) to 179^0W ...
i = 360: 1^0 band from 179^0E to 180^0 (dateline)

Section 1. DATA SOURCES

Description: ISRC

The array of data sources (ISRC) gives information on the source or combination of sources for wetland designations. The three independent data sources integrated to produce the final data base are: (1) vegetation (Matthews 1983) classified with the UNESCO (1973) system (reference UNESCO in Table 1); (2) ponded soils from the data base of Zobler (1986) based on FAO soil maps (reference FAO); and (3) fractional inundation compiled specifically for the Matthews and Fung (1987) study of methane emission from wetlands based on a global series of 1:1M scale Operation Navigation Charts (reference ONC). All cells identified as wetland by any single source or combination of sources are designated as wetlands in the integrated data set given here. The three data sources provide a total of seven source combinations as shown in Table 1. For example, type 1 locations are targeted as wetlands by all three source data bases while type 6 locations are identified as wetlands only by the ONC inundation data base.

Table 1. ISRC: Data Sources For Wetland Locations

Tape	M&F[1]	Data Source Combinations
1	A	UNESCO + FAO + ONC
2	B	UNESCO + ONC
3	C	UNESCO + FAO
4	D	UNESCO
5	E	ONC + FAO
6	F	ONC
7	G	FAO
0		other (non–wet) land
–1		water

[1] letter reference from Figure 5 of Matthews and Fung (1987)

Section 2. WETLAND TYPE

Description: IWET

A total of twelve wetland types are identified in the array IWET. Twenty–eight wetland vegetation types were originally chosen from the UNESCO system and classified into five major wetland groups on the basis of vegetational features and environmental characteristics that affect methane emission (as discussed in Matthews and Fung 1987); these are: (1) forested bog, (2) nonforested bog, (3) forested swamp, (4) nonforested swamp and (5) alluvial formations (see Table 2). Many additional locations identified as wetlands from the FAO and ONC data bases were occupied by about 100 vegetation types other than these 28 explicit wetland ecosystems. For the calculation of methane emission, vegetation types in these additional cells were initially grouped into seven categories on the basis of climate and vegetational structure (6A through 6G under G1, Table 2); each category was then associated with one of the five major wetland groups. Column G2 (Table 2) shows the secondary groupings of the additional seven vegetation categories with five major wetland groups. To allow for alternative combinations, all twelve wetland types are identified separately in the archived data base, as indicated in the Tape column.

Table 2. IWET: Wetland Types and Wetland Groupings

Tape	G1[1]	G2[2]	Description
1	1	1	forested bog
2	2	2	nonforested bog
3	3	3	forested swamp
4	4	4	nonforested swamp
5	5	5	alluvial formations
6	6A	3	tropical/subtropical forest/woodland
7	6B	3	temperate forest/woodland
8	6C	1	high–latitude temperate/boreal forest/woodland/shrub
9	6D	3	shrubland; xeromorphic formations; desert
10	6E	4	wooded grassland
11	6F	4	nonwooded grassland
12	6G	2	tundra
0			other (non–wet) land
–1			water

[1] type number from Table 2b and Table 5 in Matthews and Fung (1987)

[2] wetland group with which type was associated for methane emission calculation (Matthews and Fung, 1987)

Section 3. FRACTIONAL INUNDATION

Description: FRIN

The fractional inundation data base (FRIN) was compiled from a series of 1:1M scale Operational Navigation Charts (ONC). The values, which give the inundated proportion of 1^0 cells, were used to calculate the global wetland area of 5263 x $10^9 m^2$ (Matthews and Fung, 1987). For cells targeted as wetlands by UNESCO vegetation or FAO ponding but not by the ONC inundation data base (i.e., cases 3, 4 and 7 in Table 1), the fractional wetland coverage was prescribed as the mean inundation for the vegetation type occupying the cell; these locations were incorporated into the fractional inundation data base.

Table 3. FRIN: Fractional Inundation

Tape	Description
1. – 100.[1]	wetland
0.	other (non–wet) land
–1.	water

[1] unit is percent

Section 4. VEGETATION TYPE

Description: IVEG

The vegetation type array identifies UNESCO (1973) vegetation codes of wetland sites from the data set of Matthews (1983). Table 4 is a list of the integers in IVEG (Tape column), their associated vegetation codes and a brief description of the vegetation types. The UNESCO classification system is hierarchical, with a maximum of five alpha–numeric components in each entry. Table 4 gives the complete series of vegetation codes that occur in the full vegetation data base compiled by Matthews (1983) (i.e., codes accompanied by integers in the Tape column of the table) although not all occur in the wetlands data base of Matthews and Fung (1987) given here. Codes unaccompanied by integers occur in neither the vegetation nor wetlands data bases but are included for clarity in following the classification structure.

Table 4. IVEG: UNESCO Vegetation Types of Wetland Locations

Tape	Code	Description
	1.A	EVERGREEN FOREST
1	**1.A.1**	**Tropical evergreen rainforest**
2	1.A.1a	lowland
3	1.A.1b	submontane
4	1.A.1c	montane
5	1.A.1c2	needleleaved
6	1.A.1e	cloud
7	1.A.1f	alluvial
8	1.A.1f1	frequently flooded.
9	1.A.1f3	seasonally water–logged
10	1.A.1g	swamp
11	1.A.1g2	dominated by palms
12	1.A.1h	bog
13	**1.A.2**	**Tropical/subtropical evergreen seasonal forest**
14	1.A.2a	lowland
15	1.A.2b	submontane
16	1.A.2b2	needleleaved
17	1.A.2c	montane
18	**1.A.3**	**Tropical/subtropical semi–deciduous forest**
19	**1.A.4**	**Subtropical evergreen rainforest**
20	1.A.4b	submontane
21	1.A.4c	montane
22	1.A.4c2	needleleaved
23	1.A.4f	alluvial
24	**1.A.5**	**Mangrove forest**
25	**1.A.6**	**Temperate/subpolar evergreen rainforest**
26	1.A.6a	temperate
27	1.A.6a1	broadleaved
28	1.A.6a2	broadleaved with needleleaved trees
29	**1.A.7**	**Temperate evergreen broadleaved seasonal forest**
30	**1.A.8**	**Evergreen broadleaved sclerophyllous forest (winter rain)**
31	1.A.8a	lowland/submontane
32	1.A.8b	lowland/submontane, generally less than 50 m tall
33	**1.A.9**	**Tropical/subtropical evergreen needleleaved forest**
34	1.A.9a	lowland/submontane
35	1.A.9b	montane/subalpine
36	**1.A.10**	**Temperate/subpolar evergreen needleleaved forest**
37	1.A.10c	with conical crowns
38	1.A.10d	with cylindro–conical crowns (boreal)
39	1.A.10e	with cylindro–conical crowns (boreal): water–logged

	1.B	DECIDUOUS FOREST
40	**1.B.1**	**Tropical/subtropical drought–deciduous forest**
41	1.B.1a	broadleaved lowland/submontane
42	1.B.1b	montane (and cloud)
43	**1.B.2**	**Cold–deciduous broadleaved forest with evergreen trees or shrubs**
44	1.B.2a	with evergreen broadleaved trees and climbers
45	1.B.2b	with evergreen needleleaved trees
46	1.B.2c	subalpine and subpolar
47	1.B.2d	subalpine/subpolar alluvial
48	1.B.2e	waterlogged
49	**1.B.3**	**Cold–deciduous forest without evergreen trees**
50	1.B.3a	temperate lowland/submontane
51	1.B.3b	montane/boreal
52	1.B.3b1	broadleaved
53	1.B.3b2	needleleaved (e.g. Larix)
54	1.B.3c	subalpine/subpolar
55	1.B.3d	alluvial
56	1.B.3d2	regularly flooded with abundant herbaceous undergrowth
57	1.B.3e	swamp or peat
	1.C	EXTREMELY XEROMORPHIC FOREST
58	**1.C.1**	**Extremely xeromorphic sclerophyllous–dominated forest**
59	**1.C.2**	**Extremely xeromorphic thorn forest**
60	1.C.2a	mixed deciduous–evergreen
61	1.C.2b	deciduous
62	1.C.2c	evergreen
	2.A	EVERGREEN WOODLAND
63	**2.A.1**	**Evergreen broadleaved woodland**
64	**2.A.2**	**Evergreen needleleaved woodland**
65	2.A.2a	with rounded crowns
66	2.A.2a1	with evergreen sclerophyllous understorey (Mediterranean)
67	2.A.2b	with conical crowns (subalpine)
68	2.A.2c	with cylindro–conical crowns (boreal)
69	2.A.2d	waterlogged
	2.B	DECIDUOUS WOODLAND
70	**2.B.1**	**Tropical/subtropical drought–deciduous woodland**
71	2.B.1a	lowland/submontane, broadleaved
72	2.B.1b	montane (and cloud)
73	**2.B.2**	**Cold–deciduous woodland with evergreen trees**
	2.B.3	**Cold–deciduous woodland without evergreen trees**
74	2.B.3a	broadleaved
75	2.B.3b	needleleaved
76	2.B.3b2	mixed broadleaved–needleleaved
	2.C	EXTREMELY XEROMORPHIC WOODLAND
77	**2.C**	**Extremely xeromorphic woodland**
78	**2.C.1**	**Extremely xeromorphic schlerophyllous–dominated woodland**
79	**2.C.2**	**Extremely xeromorphic thorn woodland**
80	2.C.2a	mixed deciduous–evergreen
81	2.C.2c	deciduous
82	**2.C.3**	**Extremely xeromorphic succulent woodland**

	3.A	EVERGREEN SHRUBLAND
83	**3.A.1**	**Evergreen broadleaved shrubland or thicket**
84	3.A.1a	low bamboo thicket
85	3.A.1d	sclerophyllous shrubland or thicket
86	**3.A.2**	**Evergreen needleleaved or microphyllous shrubland or thicket**
87	3.A.2a	needleleaved
88	3.A.3b	microphyllous
	3.B	DECIDUOUS SHRUBLAND
89	**3.B.1**	**Drought–deciduous shrubland with evergreens**
90	**3.B.2**	**Drought–deciduous shrubland without evergreens**
91	3.B.2b	subalpine/subpolar
	3.B.3	**Cold–deciduous shrubland**
92	3.B.3b	subalpine/subpolar
93	3.B.3b1	dwarf shrubland, with forbs
94	3.B.3b2	dwarf shrubland, with lichens
95	3.B.3c	alluvial
	3.C	EXTREMELY XEROMORPHIC SUBDESERT SHRUBLAND
96	**3.C**	**Extremely xeromorphic subdesert shrubland**
97	**3.C.1**	**Extremely xeromorphic evergreen subdesert shrubland**
98	3.C.1a	evergreen
99	3.C.1a1	broadleaved
100	3.C.1a2	microphyllous, or leafless with green stems
101	3.C.1a3	succulent
102	3.C.1b	semi–deciduous
103	3.C.1b1	facultatively deciduous
104	**3.C.2**	**Extremely xeromorphic deciduous subdesert shrubland**
105	3.C.2b	with succulents
	4.A	DWARF SHRUBLAND
106	**4.A.1**	**Evergreen dwarf–shrub thicket**
107	**4.A.2**	**Evergreen dwarf shrubland**
108	4.A.2a	dense cushion
109	**4.A.3**	**Mixed evergreen dwarf shrub/herbaceous formation**
	4.C	EXTREMELY XEROMORPHIC DWARF SHRUBLAND
110	**4.C**	**Extremely xeromorphic subdesert dwarf shrubland**
	4.C.1	**Extremely xeromorphic subdesert dwarf shrubland**
111	4.C.1a	evergreen
112	**4.C.2**	**Extremely xeromorphic deciduous subdesert dwarf shrubland**
	4.D	TUNDRA
113	**4.D**	**Tundra**
114	**4.D.1**	**Mainly bryophyte tundra**
115	**4.D.2**	**Mainly lichen tundra**
116	4.D.2a	with caespitose dwarf shrubs and moss
117	4.D.2b	with creeping or matted dwarf shrubs and moss
	4.E	MOSSY BOGS
118	**4.E**	**Mossy bog formations with dwarf shrubs**
	4.E.2	**Non–raised mossy bog**
119	4.E.2b	string bog

	5.A	TALL GRASSLAND
120	**5.A.1**	**Tall grassland with 10–40% tree cover**
121	5.A.1a	with evergreen broadleaved tree cover
122	5.A.1a1	wet or flooded most of year
123	5.A.1c	with deciduous broadleaved tree cover
124	5.A.1c1	seasonally flooded
125	5.A.1c2	with deciduous broadleaved tree cover
126	**5.A.2**	**Tall grassland with <10% tree cover**
127	5.A.2c	with deciduous broadleaved tree cover
128	5.A.3c	with deciduous broadleaved shrub cover
129	**5.A.4**	**Tall grassland with tuft plant cover (usually palms)**
130	**5.A.5**	**Tall grassland without woody cover**
131	5.A.5a	tropical grassland
132	5.A.5a1	seasonally flooded
133	5.A.5a2	wet or flooded most of year
	5.B	MEDIUM GRASSLAND
134	**5.B.1**	**Medium grassland with 10–40% tree cover**
135	5.B.1a	with evergreen broadleaved tree cover
136	5.B.1a1	wet or flooded most of year
137	5.B.1b	with semi–evergreen broadleaved tree cover
138	5.B.1c	with deciduous broadleaved tree cover
139	**5.B.2**	**Medium grassland with <10% tree cover**
140	**5.B.3**	**Medium grassland with shrub cover**
141	5.B.3c	with deciduous broadleaved shrub cover
142	5.B.3e	with deciduous thorny shrub cover
143	**5.B.4**	**Medium grassland with open cover of tuft plants (usually palms)**
144	5.B.4a	subtropical, with open groves of palms
145	**5.B.5**	**Medium grassland without woody cover**
	5.B.5a	mainly sod grasses
146	5.B.5a1	wet or flooded most of year
147	5.B.5a2	on sandy soil or dunes
148	5.B.5b	mainly bunch grasses
149	5.B.5b2	wet or flooded most of year
	5.C	SHORT GRASSLAND
150	**5.C.1**	**Short grassland with 10–40% tree cover**
151	5.C.1a	with evergreen broadleaved tree cover
152	5.C.1c	with deciduous broadleaved tree cover
153	5.C.1d	with evergreen needleleaved tree cover
154	**5.C.2**	**Short grassland with <10% tree cover**
	5.C.2a	with evergreen broadleaved tree cover
155	5.C.2a1	seasonally flooded
156	5.C.2c	with deciduous broadleaved tree cover
157	**5.C.3**	**Short grassland with shrub cover**
158	5.C.3b	with semi–evergreen broadleaved shrub cover
159	5.C.3c	with deciduous broadleaved shrub cover
160	5.C.3e	with deciduous thorny shrub cover
161	**5.C.5**	**Short grassland without woody cover**
162	5.C.5a	tropical alpine, open/closed bunch–grasses with tuft–plant cover
163	5.C.5b	tropical alpine, open bunch grasses
164	5.C.5d	bunch grasses of varying coverage with dwarf shrubs
165	**5.C.6**	**Short grassland without woody cover**
166	5.C.6a	short–grass communities in semi–arid climates
167	5.C.6b	bunch–grass communities (tussock)

168	**5.C.7**	**Short to medium tall mesophytic grassland (meadow)**
169	5.C.7a	sodgrass communities, forbs in low altitude, cool humid climates
170	5.C.7b	alpine/subalpine meadows, high latitudes
171	5.C.7b2	alpine/subalpine meadows, high latitudes, rich in dwarf shrubs
172	5.C.7b3	snow–bed communities in high latitude alpine/subalpine meadows
173	**5.C.8**	**Graminoid tundra**
174	5.C.8a	bunch–form with mosses and lichens (Eriophorum)
	5.D	FORB FORMATIONS
175	**5.D.2**	**Low forb communities (<1m)**
176	5.D.2a	perennial flowering forbs and ferns
		OTHER

178	**7**	**ice**
0		**other non–wet land**
–1		**water**

Section 5. SOIL TYPE

Description: ISOL

Soil types for wetland sites (ISOL) are from the data of Zobler (1986), digitized from the global series of soil maps produced by FAO (1971–1981). Locations are identified by integers associated with 106 soil units; ice is identified as 107. Table 5 lists integer values on the tape, along with FAO codes and FAO soil unit names. Note that FAO soil unit data in this array are independent of the distribution of ponded phase soils (from Zobler 1986) selected as one of three sources used to identify wetland locations by Matthews and Fung (1987).

SECTION 6. METHANE EMISSION FROM NATURAL WETLANDS

The data bases presented here were developed to determine the distribution and characteristics of natural wetlands on a global scale and to evaluate the role of wetlands in the annual emission of methane from terrestrial sources. Table 6 (from Matthews and Fung, 1987) shows the latitudinal distribution of wetland areas and the annual methane emission from wetland groups (see Section 2 and Table 2 for explanation). The length of methane emission periods was derived from simple assumptions about the likely duration of thaw conditions in high latitudes and inundation conditions in the subtropics and tropics.

The latitudinal distribution of wetland area derived here shows approximately 50% of the world's wetlands, primarily peat–rich bogs, concentrated in the zone between 50^0N and 70^0N. Peat–poor swamps, with lower flux rates and longer methane production seasons, are prevalent in low latitudes; about one–third of the wetlands are spread throughout the area from 10^0N to 30^0S. In this study, the distribution of emission generally parallels that of areas since large daily flux rates for short seasons in the high latitudes balance lower fluxes for longer periods in the tropics and subtropics. The total annual emission of methane from natural wetlands was estimated to be ~110 Tg (10^{12}g), equal to about 20% of the total terrestrial source strength.

Wetlands are generally acknowledged to play a significant role in the global methane budget. The series of data sets presented here, integrated into a comprehensive data base of wetlands and their attributes, provides a framework to analyze and evaluate the role of wetlands in the methane cycle. However, estimates of the magnitude and seasonality of this source may be considered preliminary; further constraints on the wetland source will be provided by measurements in a greater variety of representative wetland ecosystems and throughout methane production seasons and by isotopic measurements.

Table 6. Latitudinal Distribution of Wetland Areas and the Annual Methane Emission From Wetland Groups (from Matthews and Fung, 1987)
